

AssetScape®

# Asset Management Solutions

## Capability – Sheet No.2

### Asset Management System

scap09 - Copyright 2014 Sybersystems Limited. Licence expires in 10 days

AssetScape includes an embedded asset maintenance management module in the software, which has the capability to manage any asset with modern demands for technology in mind - visible, usable and accessible data.

The stand out differentiator against most of the current offerings on the market is its 3D data management capability. The user interactive functions have been designed to remove the need for users to navigate through many screens within the AMS to perform tasks. The system is intuitive and saves time when viewing, managing and processing asset data as part of business as usual activities. The software features "drag and drop" functionality which can be found in some of the modern technologies and products that are familiar to us all.

#### Capabilities include:

- Mobile solution
- Works scheduling and ordering
- Highly configurable data structures for all assets
- 3D asset models having explode function to manage all unseen components
- Fly through inspection function – routes can be reviewed by defect or asset type (Create routes – Play, Stop, Pause, Drag and Drop functions)
- Reporting
- Asset Data Quality auditing
- Models – Pavement management, Risk based modelling, Funding options etc
- Underground asset management
- On-site workforce interaction – Works (live streaming), Safety (risk assessments), Whereabouts, Control Centre Functions
- Cross-Asset maintenance scheduling, planning and modelling
- Energy and CO2 reporting
- Potential flooding hotspot function
